Personal Data

Name:	AID-am_2.8.5.1
Year of birth:	1976
Nationality:	French
Languages:	German, English, French
Disposable:	according to agreement
Place of action:	according to agreement
Qualification:	Bachelor in Network Service Administration, University of Limoges, France Associate's degree in Economy, Management and Accountancy, University of Strasbourg, France

Focus

Java, C#, Python, Javascript, Selenium, Docker, VirtualBox, Hyper-V, Linux, Windows, Data Analytics, Ansible, SoapUI, Jmeter, Gatling, UC4

Products | Standards | Experience

Programming languages

C#

CSS

HTML

Java

Javascript

Python

Scala

Typescript

Other experiences

.Net core

Akka Scala

Amazon EC2

Angular

Ansible

AWS

Django

Gitlab

Jira

Microsoft Azure

Selenium WebDriver

SpringBoot

Terraform

Projects

Period: 03/2020 - 07/2020
Customer: Allianz, Munich
Role: Software Developer

Project description: **Build Tools Development**
Artifacts Source Code Versioning/Releasing Tools implementation
AWS provisioning and deployment for DB2 based applications
Tools / Languages: Java, Ansible, Terraform, AWS, Amazon EC2

Period: 04/2019 - 12/2019
Customer: Kapsch, Austria
Role: Integration tester

Project description: **Test automation for Web applications, SOAP APIs and REST APIs**

- Selenium Grid/Nodes configuration
- Web UI test implementation with Python / Robot Framework
- Web API test implementation with SOAPUI and Groovy scripts
- Test Framework containers implementation with Docker
- Network traffic analysis with Wireshark

Performance test

- Load tests implementation with JMeter / Groovy scripts

Azure Cloud Provisioning and deployment automation

- Ansible playbook script implementation for Azure Cloud provisioning
- Docker image/registry management
- Powershell tasks scripts implementation
- Continuous Integration and Deployment jobs configuration

Gitlab build job administration

- Build runners creation and implementation
- Build task implementation and administration
- Git project repository administration

Authentication system configuration

- Keycloak server setup
- Clients and Users configuration

Period: 05/2018 - 02/2019
Customer: Siemens, Germany
Role: Contractor

Project description: **Test automation framework for Web application and REST API**

- Selenium Grid/Nodes configuration
- Web UI test implementation with Typescript / Protractor / Cucumber-JS
- Web UI & API test implementation with Python / Robot Framework
- Test Framework containers implementation with Docker
- Eclipse

Test automation framework for Android Mobile Application

- Test implementation with UIAutomator / Python / Robot Framework
- Test Framework containers implementation with Docker
- Data Analytics Portal Implementation
- Frontend implementation with Angular 5 / ngx-Bootstrap
- Backend implementation with Restify / Node.js / MongoDB
- Platform containers implementation with Docker
- VSCode

Gitlab build job administration

- Build runners creation and implementation
- Build task implementation and administration
- Git project repository administration

Period: 11/2017 - 04/2018
Customer: Cubic Telecom, Dublin, Ireland
Role: Contractor, Software Development Engineer in Test

Project description: **Test automation framework for Web application and REST API**

- Selenium Grid/nodes configuration
- Web UI test implementation with C# / NUnit
- Jira Zephyr API client implementation for automated Jira test case results management
- Visual Studio

Nuget packages implementation and management

- Nuget package utilities implementation

- Nuget package build and publishing to repository configuration

Test performance framework

- Test performance framework implementation with Gatling, Scala and Maven
- Web console with Graphite setup

Visual Studio Team Services test plan job design

- Powershell tasks scripts implementation
- Continuous Integration jobs configuration

Docker resources automated management with Azure Cloud services

- Docker resources automated management with Azure CLI
- Azure resources monitoring

Period: 05/2017 - 10/2017
Customer: Intel, Munich
Role: Software Development Engineer in Test

Project description: **Implementation of a Java / Selenium test automation framework for Web application**

- Selenium Grid and Selenium nodes configuration
- UI test implementation
- RESTful API test implementation
- Maven
- Junit
- Eclipse

Jenkins test plan job design:

- Tasks scripts implementation
- Jobs configuration
- Java Maven test projects configuration

Windows Hyper-V test environment virtualization design and implementation:

- Windows 10 VM build automation with Hyper-V and Powershell
- Windows 10 VM authentication configuration with Active Directory
- Windows 10 VM deployment and management on Windows server 2012
- Powershell test script implementation

Period: 01/2017 - 02/2017
Customer: Amido, London, UK
Role: Software Development Engineer in Test

Project description: **Java / Selenium test automation framework for Web application**

- Selenium
- JUnit
- Eclipse

Java security test automation for authentication protocols

- Forgerock OpenAM
- OpenID Connect

Jenkins continuous integration server job plan design

- Tasks scripts implementation
- Jobs configuration
- Java Maven test projects

Docker test Linux environment set up

- Tomcat based module image build configuration
- Container build and execution script implementation
- LDAP & OpenDJ server set up and configuration
- Docker container configuration with Docker Compose
- Docker container orchestration with Docker Swarm
- Microsoft Azure Container Service configuration

Period: 09/2015 - 10/2016
Customer: Callsign, London, UK
Role: Software Development Engineer in Test

Project description: **Documentations (on Confluence) and bug tracking in the bug management system (on Jira)**

Java / Selenium test automation framework for Web application

- CouchbaseDB client
- Selenium HQ
- JUnit 4
- Eclipse

Java security test automation for authentication protocols

- SAML
- OpenID Connect

Bamboo continuous integration server job plan design

- Tasks scripts implementation
- Jobs configuration
- Java Maven test projects

Vagrant/Docker test Linux environment set up

- Tomcat based module image build configuration
- Container build and execution script implementation
- LDAP server set up and configuration

Windows server test Linux environment set up

- Windows server 2012 set up and configuration
- Active Directory server set up and configuration
- Powershell test script implementation

Windows client application test automation on Python / Java based framework

- Sikulix API client implementation
- Java/Python wrapper implementation
- Acceptance and BDD test framework with Python & Robot Framework

Android applications test automation with Appium

- Implementation and extension of test coverage on Native Android applications
- Integration of behaviour oriented testing through Cucumber
- Set up of Selenium test server machines
- Set up of Docker Images to run Appium tests on real android devices & emulators
- Configuration of Jenkins test plans
- Configuration of Docker virtual test machines for Jenkins server

Period: 02/2015 - 08/2015

Customer: Xanadu, Cork, Ireland

Role: Contractor, Software Development Engineer in Test

Project description: **Documentations (on Confluence) and bug tracking in the bug management system (on Jira)**

Java Web application development of a messaging rules configuration system:

- Spring MVC
- Kafka
- AngularJS
- Bootstrap
- Eclipse / VSCode

Python test automation framework implementation for betting backend applications

- Python Nose test framework
- JSON client creation for web API
- Kafka client
- Test report Java client connected to TestRail API

- acceptance and BDD test framework with Robot Framework

Performance monitoring

- JMX
- Jolokia

Linux test server system configuration

- Python/Virtualenv
- Java and Maven
- SpringXD
- Kafka/Zookeeper
- MongoDB

Node.js / MongoDB betting data monitoring system development

- MongoDB
- Node.js
- AngularJS

Bamboo continuous integration server jobs plan design

- Tasks scripts implementation
- jobs configuration

Agile development methodologies including Extreme Programming and Scrum

- focus on automated testing
- pair programming
- simple design
- scrum board follow-up
- retrospective meeting organization

Period: 05/2014 - 12/2014

Customer: Fidelity Investment, Galway, Ireland

Role: Contractor, Software Development Engineer in Test

Project description: **Review of test specifications and test coverage on HP Quality Center**
Documentations (on Ribbit) and bug tracking in the bug management system (on Jira)
Java test automation framework for financial and trading applications

- Maven 3 projects
- TestNG
- Selenium WebDriver (Web browser UI testing)
- HTML Unit (UI headless testing)
- SSH client creation, based on Jsch library (remote server and system testing)
- JSON and SOAP client (web API testing)

- Test report Java client connected to HP Quality Center API

.NET test automation framework for financial and trading data streaming SDK

- NuGet
- NUnit
- .NET TCP/IP streaming client
- .NET test report client connected to HP Quality Center API

Windows server 2012 and Linux test server system configuration

- Java and Maven
- Jenkins slave engine
- remote Selenium server
- Eclipse

Jenkins continuous integration server jobs plan design

- Tasks scripts implementation
- Jobs configuration
- Java Maven test projects and .NET Nunit test projects

Automic UC4 with Jenkins server integration system implementation

- UC4 script
- Windows Powershell script
- UC4 deployment module
- UC4 client implementation connected to Jenkins API

Agile development methodologies including Extreme Programming and Scrum

- focus on automated testing
- pair programming
- simple design

Period: 09/2013 - 12/2013
Customer: Houghton Mifflin Harcourt, Dublin, Ireland
Role: Contractor, Software Development Engineer in Test

Project description: **Java / Selenium test automation framework for Web application**

- JBoss Arquillian Graphene
- Selenium HQ
- JUnit
- Eclipse

Jenkins continuous integration server jobs plan design

- Tasks scripts implementation
- Jobs configuration
- Java Maven test projects

Period: 04/2012 - 08/2013

Customer: Groupon, Berlin, Germany

Role: Contractor, Software Development Engineer in Test

Project description: **Review of test specifications and test coverage (on Testlink)**
Documentations (on Confluence) and tracking errors in the error management system (on Jira)
Java / Selenium test automation framework for Web applications

- Selenium HQ
- JBehave for the BDD stack
- JUnit 4
- Salesforce API client application
- JDBC for Postgresql database

Mobile native applications test automation framework for Android & iOS

- Implementation and extension of test coverage on Native Android applications
for Andoid: JUnit 3, ADB and Android Test Agent
for iOS: Frank iOS test framework
- Integration of behaviour oriented testing through Cucumber
- Configuration of Jenkins test plans
- Configuration of test slave machines for Jenkins server for running real Android/iOS devices and emulators

GUI test reports module development for TestLink (Test Management System)

- PHP5.3
- Javascript framework Ext JS 4

End client test report notification application development (back end data from TestLink API)

- iPhone client
iOS5 native application
storyboards based
- HTML5 client
- Javascript framework JQuery
